Why Partner with the Water Sector Trust Fund?

Financial support for improved access to water and sanitation

WATER SECTOR TRUST FUND

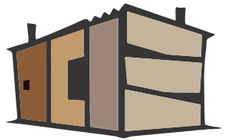

WATER SECTOR TRUST FUND

www.waterfund.go.ke

Our Competitive Advantage

The Water Sector Trust Fund (WSTF) is the pro-poor financing institution of the Kenyan water sector that successfully upscales water supply and sanitation in underserved areas of the country. With over 2,300 projects, WSTF has reached more than 4.1 million people with improved water and sanitation services since 2005. The efficient delivery mechanisms and partnerships that we have established give us a competitive advantage.

Pro-poor targeting

WSTF is the only institution legally mandated to provide financial support for increased access to water and sanitation services for marginalised and underserved areas in Kenya. We finance cost-effective secondary 'last mile' infrastructure.

Transparent & participatory

We apply transparent selection criteria to the technical, social and financial aspects of each funding proposal. How to apply for WSTF funds, and how the funds are prioritised, disbursed to and utilised by implementing agents, is clearly documented. This ensures that resources are used as they ought to be, and audit queries are keenly followed up. WSTF handles the resources entrusted to it with integrity and full accountability. Our activities are audited annually by independent and internationally reputed firms.

Sustainable

WSTF has adequate human capital and technical and operational capacity to handle diverse expectations from development partners. Sustainability is assured through regular monitoring of operations, and all funded infrastructure is GPS-referenced and documented. The status of WSTF-funded investments can be viewed online at www.majidata.go.ke.

Value for money

WSTF has established technical standards and controls the quality of construction through monitoring and field visits. By focusing on last mile projects that directly benefit poor and marginalised populations, both urban and rural, our programmes offer value for money and a low cost per beneficiary through proven and standardised solutions.

Upscaling

WSTF has vast experience in implementing water supply and sanitation investments in all counties in Kenya. Lessons learned along the way have led to improvements and cost-efficient replication of the most successful approaches, the key to closing the gap wherever people are still underserved.

Responsiveness

Our many years of experience with repeating call cycles, where proposals are sought from the water utilities, funds are granted and investments monitored, has led to continuous institutional learning and improvement, and to regular updating of technological solutions and business models. Over the years, our funding systems have become fine-tuned for ready responsiveness to changing sector demands.

Our Competitive Results

WSTF occupies a unique position within the water sector, with extensive experience in the management of development partner-funded programmes, appraisal systems and monitoring structures focused on underserved areas of Kenya. A number of other African countries are currently bench-marking against WSTF to develop and improve their own systems.
